

Brother multifunction devices offer modern fax solutions designed to support secure and seamless document exchange. These features are ideal for environments that include fax documents and can help improve workflow, while getting information where it needs to go.

Fax Forward to Cloud or Email

Automatically forward incoming faxes to a defined cloud service or email address¹.

- Convenient built-in feature within Brother Apps
- Forward to Google Drive™, Dropbox, OneDrive, Box, OneNote, or Evernote®
- Forward to a designated email address using the Easy Scan to Email feature

- ✓ View received faxed documents from virtually anywhere
- ✓ Combine features to have the machine send an email notification that a fax was forwarded to a cloud service

Use if: Environment requires an improved workflow for receiving faxes and forwarding to the cloud or an email address.

Fax Forward

Automatically forward incoming faxes to another fax machine or email address².

- Enables a user to share received documents with other users via fax

- ✓ View received faxed documents from virtually anywhere via email

Use if: Environment requires an improved workflow for receiving faxes and forwarding to another fax destination or email address.

Fax to Server

Scan documents and send them over the network to a fax server.

- Documents are converted to fax data and sent using standard phone lines
- Brother all-in-one devices can integrate into a fax server environment

- ✓ Eliminate the need for individual phone lines connected to each machine

Use if: Environment has a single fax server installed.

I-Fax is an alternative solution that can be implemented to address security or volume concerns, as well as to track incoming and outgoing faxes.

I-Fax enables you to send and receive faxes over the Internet instead of using a regular phone line (which may not be easily accessible and can also be cost prohibitive).

¹ Requires Internet connection. Fax Forward to Cloud requires an account with the desired cloud service.

² Requires POP3/SMTP or IMAP mail server support for forward to email.
