Print Solutions
Secure Printing

brother
at your side

Safeguarding printed documents is a critical requirement. Brother printers and all-in-ones offer secure printing solutions that help protect confidential or sensitive documents while adhering to document handling guidelines and regulations.

Brother offers a variety of solutions that do not require a sophisticated server network or print management middleware, as well as partners that offer more powerful solutions if required.

Secure Print+
Retrieve printed documents via NFC card or PIN.

Secure Print Advanced
Retrieve printed documents on any network-connected Brother printer (follow-me printing).

Cloud Secure Print
Password-protected printing over the Internet via PIN[1].

Active Directory Print Release
Retrieve printed documents via Active Directory sign-in information.

✔ **Secure Printing**
Confidential or sensitive material prints only when you're ready to retrieve the document at the machine.

✔ **Cost Effective**
Solutions that do not require a server network or print management middleware, along with robust partner solutions.

✔ **Easy Operation**
Release documents via NFC card, external third-party card reader[2], PIN, password, or Active Directory sign-in information.

Secure Print Advanced allows easy and secure retrieval of printed documents on any network-connected Brother printer. By using NFC authentication, users can conveniently access the list or queue of documents they need to print.

Integrated Partner Solutions[2]
Contact a Brother authorized reseller for pricing.

PaperCut MF

TUNGSTEN AUTOMATION FORMERLY KOFAX

nddprint

PaperCut MF
Integrated solution to retrieve printed documents using the built-in NFC card reader, no external release stations required. Also supports external third-party card readers[2].

Secure Print Advanced

Simple on-demand printing

Secure Print Advanced offers a secured printing environment via an easy user profile setup, and management using Secure Function Lock. This is a cost-effective solution that does not require a server network or print management middleware.

Sensitive documents are printed only when the assigned users on the device are ready to release them. Multiple layers of authentication include print job release via NFC card for devices with an integrated NFC card reader, as well as PIN authentication, and Follow-Me printing.

Get Started with Secure Print Advanced in four easy steps:

1 Send print job to device from a registered user.

2 Tap NFC card or enter PIN to authorize document release.

3 Choose print file from the job list on the printer or all-in-one display.

4 Retrieve the printed document.

1 Requires an Internet connection.
2 Requires additional purchase.
